[Jeffress Trust Awards Program in Interdisciplinary Research](#)

Health Resources in Action

Due: January 18, 2018 (2:00 PM EST)

The Jeffress Trust Program provides \$100,000 awards as seed funding to support one-year pilot studies that encourage the development of innovative interdisciplinary strategies that integrate computational and quantitative scientific strategies across a broad range of scientific disciplines. Full-time faculty at institutions in Virginia that are within seven years of their first faculty appointment are eligible to apply as Principal Investigators. Student participation is a requirement of the proposed research plan. Eligible research areas for Jeffress support include astronomy, biosciences, chemistry, computer sciences, engineering, environmental sciences, material science, mathematics and physics. Research in social, economic and behavioral sciences, including psychology, are currently outside the scope of Jeffress funding. The Hazel Thorpe Carman and George Gay Carman Trust has an interest in potentially offering an additional award in support of one project submitted through the Jeffress Awards Program mechanism that meets the criteria of the Jeffress Program and is relevant to the funder's focus of either blood disorders or mental health.

GMU Internal Deadline: November 27, 2017

Internal applications should include the following:

Project title

Applicant name

List of Co-investigator(s) if applicable

Project Summary (up to 3 pages)

Please include elements noted in the Application Guidelines including the role of undergraduate student participation
